USB HID Host (1/3)

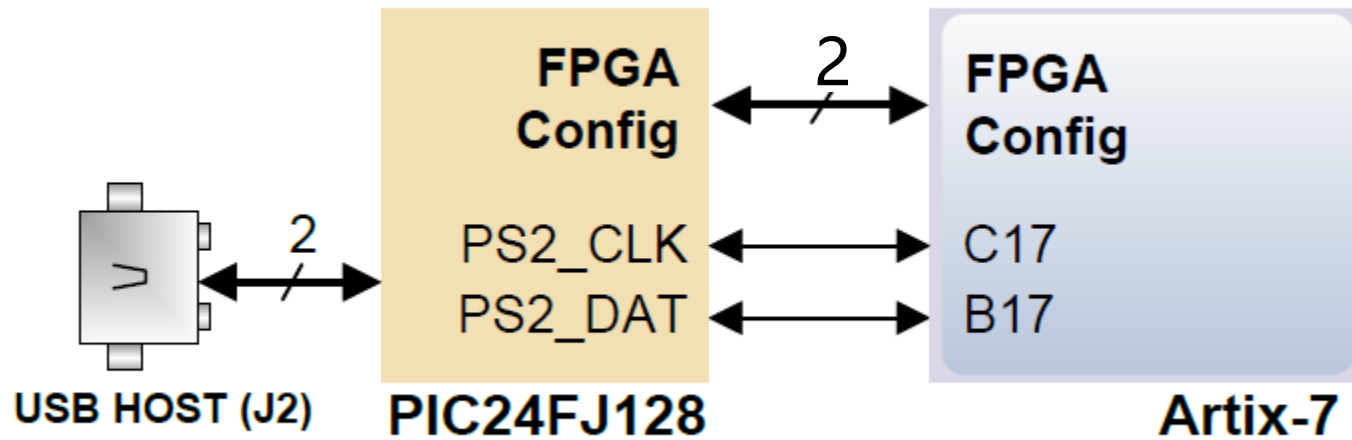

HID : Human Interface Device

USB HID Host (2/3)

USB HID Host (3/3)

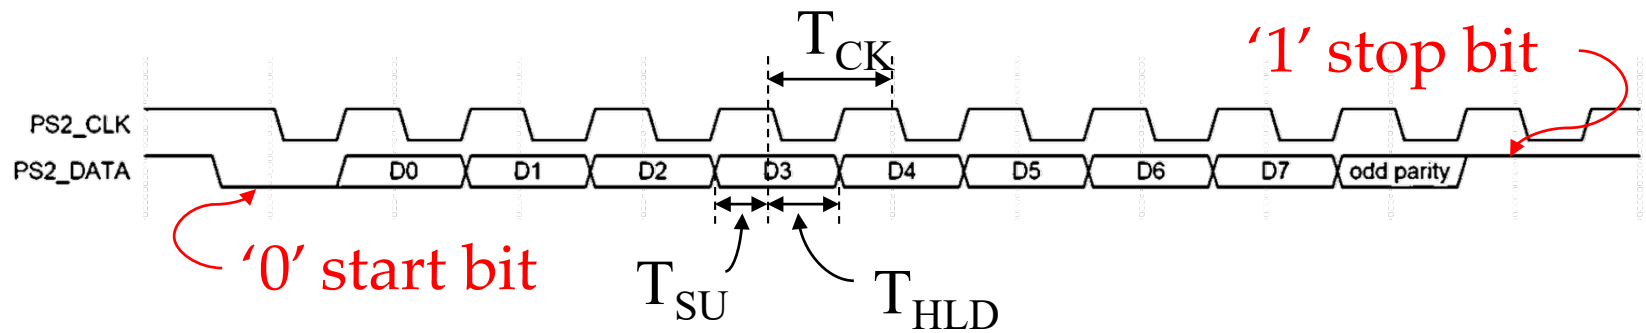

Microchip PIC24FJ128

- Configuration mode
 - Download a bit-stream to the FPGA.
- Application mode
 - In Basys 3, this is called USB HID Host mode.
 - Only a single mouse or a single keyboard can be used.
 - PS2_CLK and PS2_DATA are used to implement a standard PS/2 interface.

HID Controller

Symbol	Parameter	Min	Max
T_{CK}	Clock time	30 us	50 us
T_{SU}	Data-to-clock setup time	5 us	25 us
T_{HLD}	Clock-to-data hold time	5 us	25us

Initialization

- Initially, Basys3 identifies the devices through PS2_CLK and PS2_DATA.
- When Basys3 is idled (unconnected), Basys3 reads 0xFA using a Read ID command.
- When a keyboard or mouse is connected to the Basys3, a “self-test passed” command (0xAA) is sent to the Basys3.
 - 0xFA → 0xAA
- Scancode of keyboard
 - Each key is assigned a code
 - If the key is held down, the scan code will be sent repeatedly about once every 100ms.
 - When a key is released, an F0 key-up code is sent, followed by the scan code of the released key.
 - Some keys (right Ctrl, right Alt, ...) , called extended keys, send an E0 ahead of the scan code.

PS/2 Port

Example PC compatible (IBM PS/2) scancodes

key	set 1 (IBM PC XT)		set 2 (IBM PC AT)		set 3 (IBM 3270 PC)	
	press	release	press	release	press	release
A (normal letter)	1E	9E	1C	F0 1C	1C	F0 1C
Return / Enter (main keyboard)	1C	9C	5A	F0 5A	5A	F0 5A
Enter (numeric keypad)	E0 1C	E0 9C	E0 5A	E0 F0 5A	79	F0 79
Left Windows key	E0 5B	E0 DB	E0 1F	E0 F0 1F	8B	F0 8B
Right Windows key	E0 5C	E0 DC	E0 27	E0 F0 27	8C	F0 8C

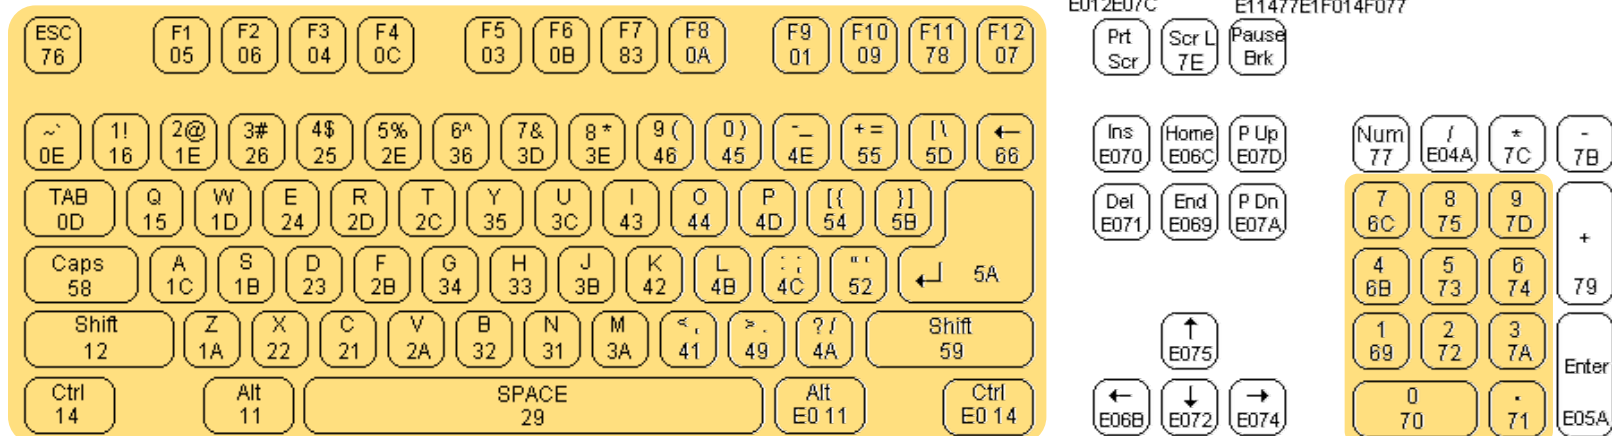

from Wiki

PS/2 Scancode

Extend Code	Break Code	Make code
E0	F0	XX

(means “release”)

We only use the yellow parts of the keyboard.

PS/2 Scancode (Example)

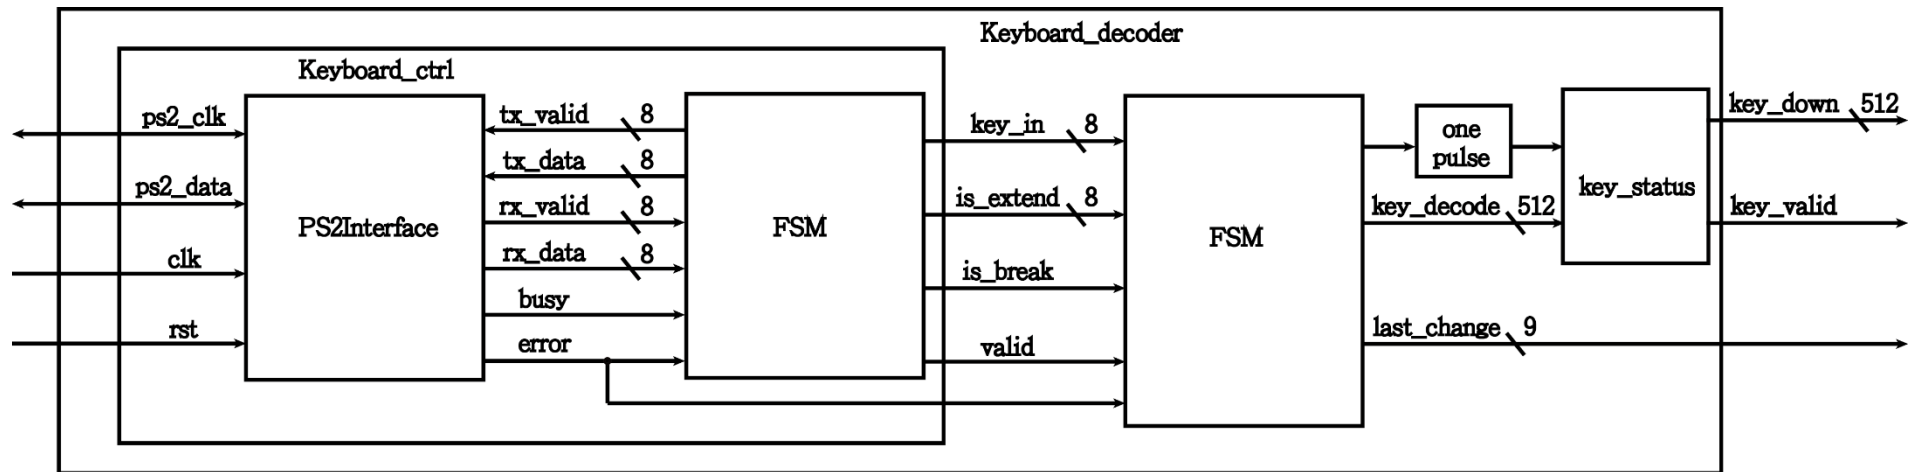

L Alt press			11
L Alt release		F0	11
R Alt press	E0		11
R Alt release	E0	F0	11

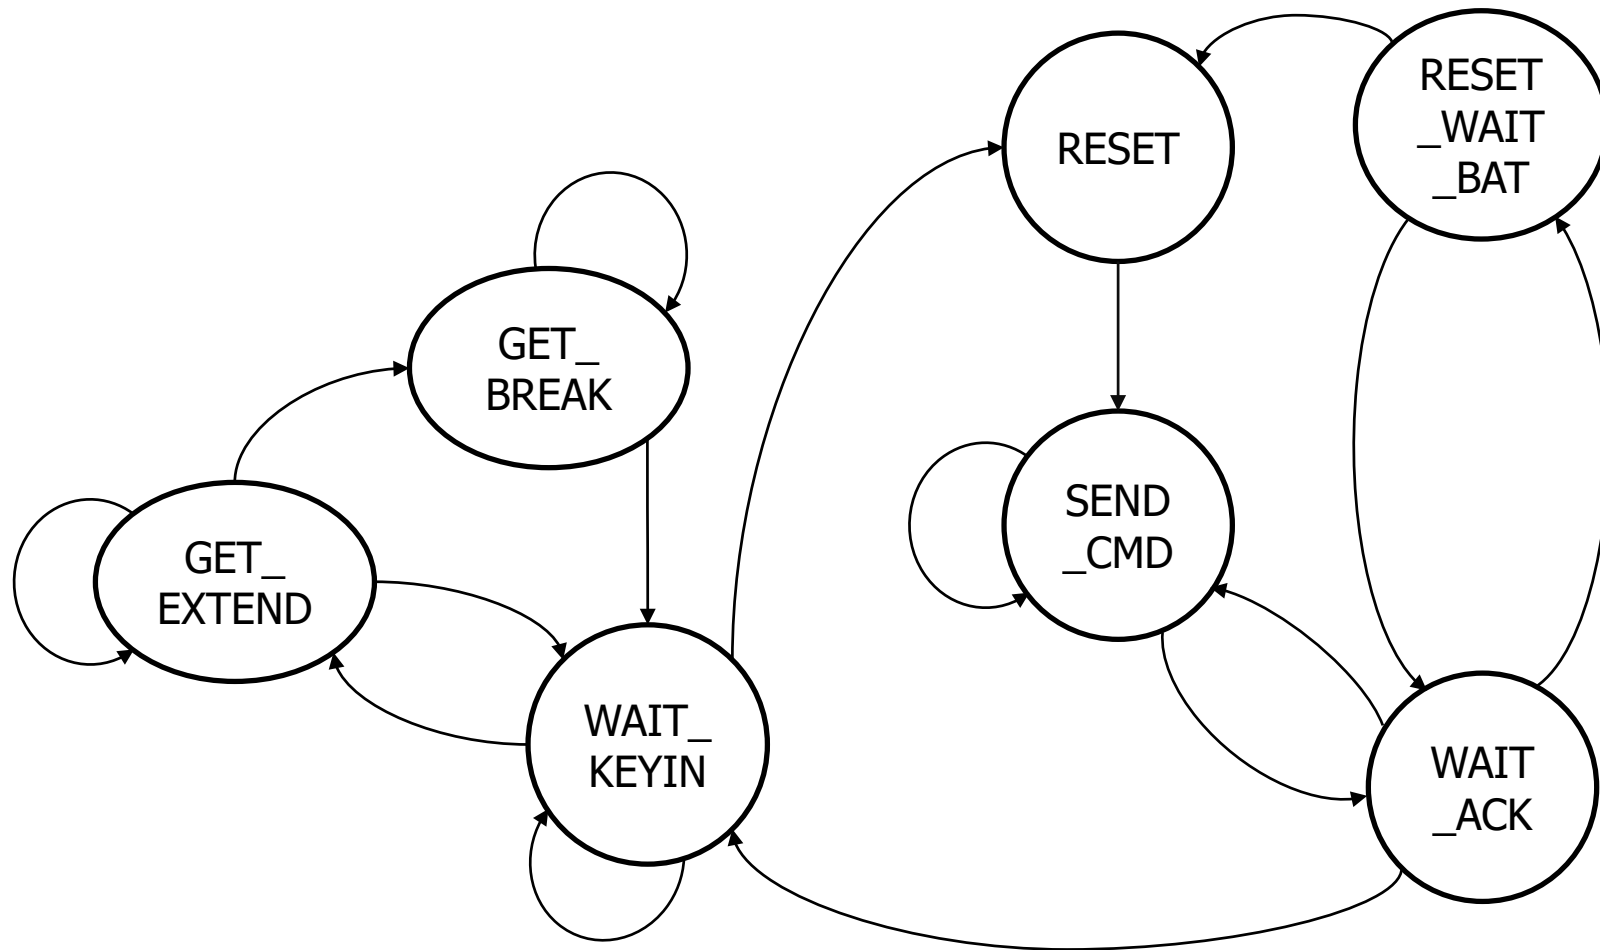

Verilog Module: KeyboardCtrl(1/2)

- In Keyboard-Controller
 - Ps2Interface.v
 - KeyboardCtrl.v
- KeyboardCtrl.v
 - **Input** : PS2_CLK, PS2_DATA, rst, clk
 - **Output** : key_in, is_extend, is_break, valid, err

Verilog Module: KeyboardCtrl(1/2)

KeyboardCtrl (Output Example 1)

L Alt press

KeyboardCtrl (Output Example 2)

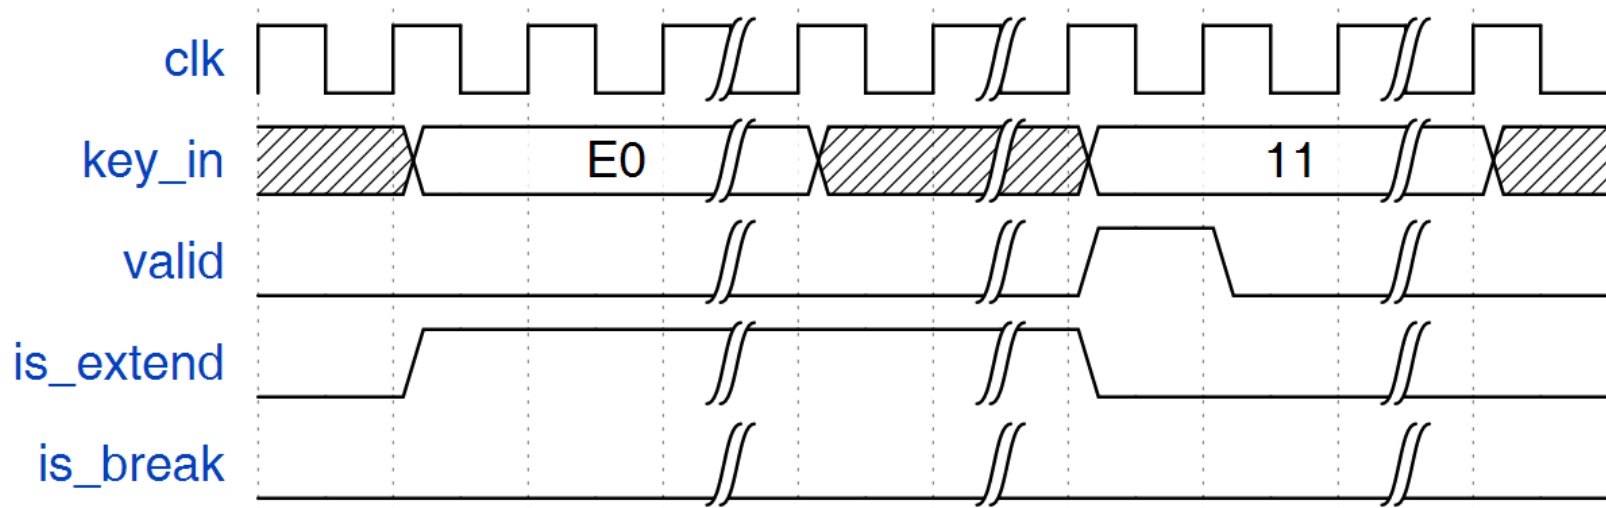

L Alt release

KeyboardCtrl (Output Example 3)

R Alt press

KeyboardCtrl (Output Example 4)

R Alt release

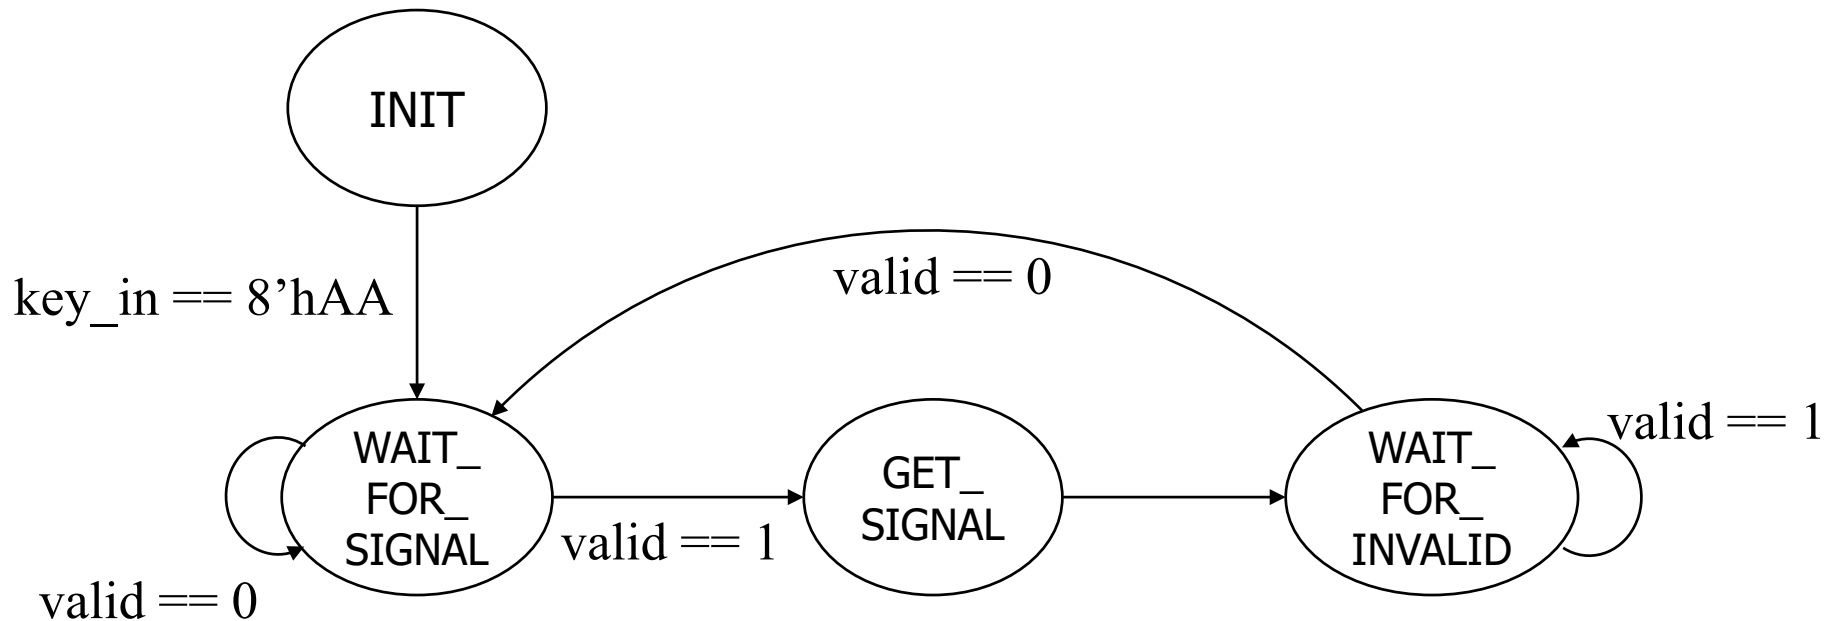

Verilog Module: KeyboardDecoder (1/5)

- In Keyboard Sample Code
 - KeyboardDecoder.v
- I/O for KeyboardDecoder
 - Input : PS2_CLK, PS2_DATA, rst, clk
 - Output : key_down, last_change, Key_valid

Verilog Module: KeyboardDecoder (2/5)

Verilog Module: KeyboardDecoder (3/5)

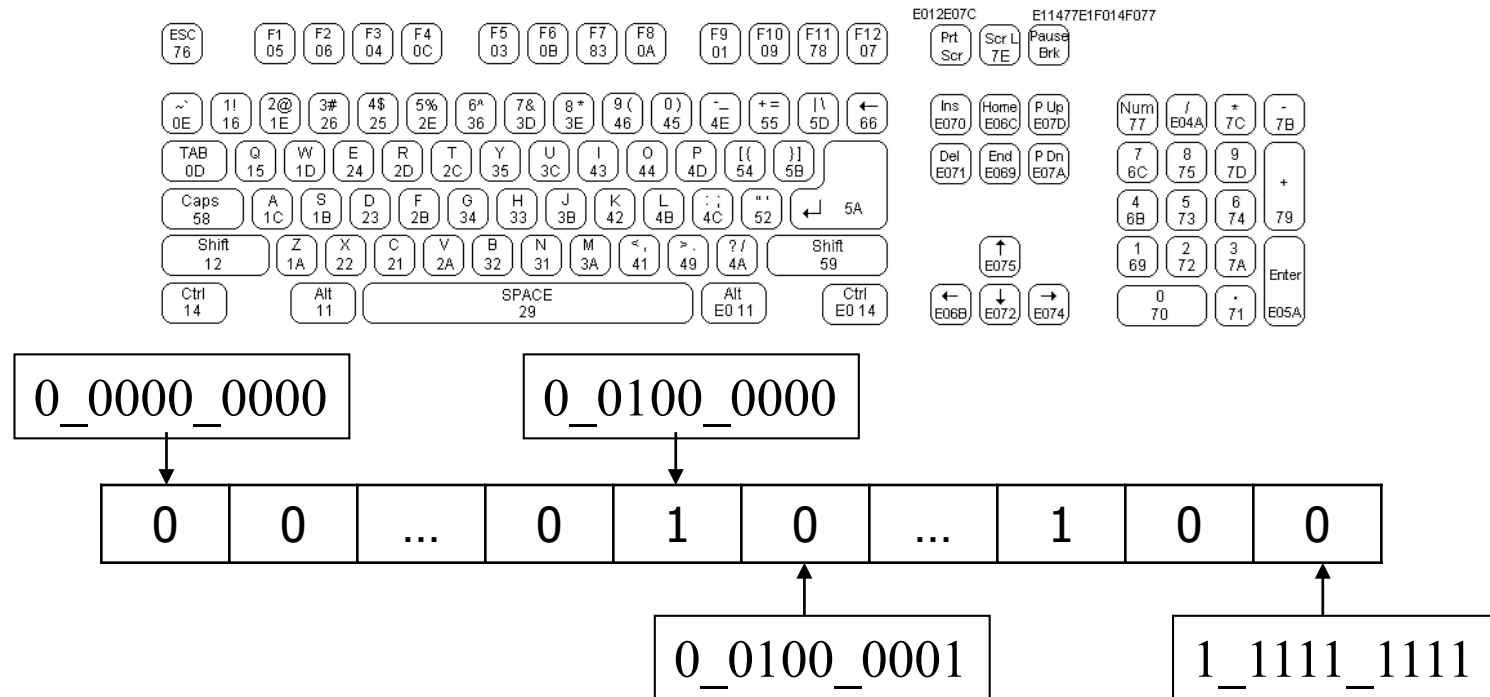

- last_change: 9 bits
 - represent the key which has been pressed or released.

- key_valid: 1 bit
 - should be active for one clock period (100MHz) when any key is pressed or released.

Verilog Module: KeyboardDecoder (4/5)

- key_down [511:0] are status bits. Each bit indicates pressed (1) or released (0) of each button of the keyboard.

- the key indexed by “0_0100_0000” is pressed.
- the key indexed by “0_0100_0001” is released.

Verilog Module: KeyboardDecoder (5/5)

- key_down [511:0]
- key_down <= key_down | key_decode;

	0	1	1	0	1
or	0	0	0	1	0
<hr/>					
	0	1	1	1	1

- key_down <= key_down & (~key_decode);

	0	1	1	0	1
and	1	1	0	1	1
<hr/>					
	0	1	0	0	1

How to Use IP (1/3)

How to Use IP (2/3)

The screenshot illustrates the process of using an IP block in Vivado. It is divided into three main sections:

- Left Panel (Project Manager):** Contains navigation options. The **IP Catalog** option is highlighted with a red circle and the number **7**.
- Center Panel (IP Catalog):** Displays a list of IP blocks. The **KeyboardCtrl_v1_0** block is selected and highlighted with a red circle and the number **8**. The right side of this panel shows the **Customize IP** configuration for **KeyboardCtrl_v1_0 (1.0)**, including a port diagram and component settings.
- Right Panel (Generate Output Products):** A dialog box showing the output products to be generated. The **Generate** button is highlighted with a red circle and the number **10**. At the bottom of the entire window, the **OK** button is highlighted with a red circle and the number **9**.

How to Use IP (3/3)
